EDUCATION

•Prestige Institute of Management & Research

2022 – June 2026

B.Tech in Computer Science Engineering

Bhopal, India

EXPERIENCE

•KEP Labs (Keshava Elite Projects)

Python Backend and Simulation Intern

Remote

- Built a REST API prototype using FastAPI to simulate IoT device behaviour with modular router architecture, Pydantic v2 request validation, and clean separation of endpoint logic across device, status, and health routes
- Developed and maintained backend services using Python (FastAPI, Django) to support internal simulation platforms; worked independently in a fully remote environment across the full development cycle
- Performed testing and debugging of backend modules using Postman and pytest; documented API specifications and endpoint behaviour for internal team reference

•Jain Temple Accounting System

Backend Developer (Commissioned Project)

Bhopal, India

- Gathered requirements from non-technical stakeholders and designed a normalized PostgreSQL schema with 6 tables (Family, Donor, Event, Pledge, Payment, EventSubCategory) to model complex community donation workflows
- Built backend using Django with REST endpoints covering donation recording, event management, pledge tracking, and role-based access for Admin, Accountant, and Trustee roles
- Implemented core business logic for pledge-to-payment reconciliation and event subcategory-based contribution tracking, translating manual accounting rules directly into backend validation

PROJECTS

•Credit Approval Backend System

Django REST Framework, Celery, Redis, PostgreSQL

- Built a loan approval backend using Django REST Framework with a rule-based credit scoring engine covering income, debt-to-income ratio, and repayment history — mapping inputs to eligibility category and interest rate through explicit business logic
- Offloaded heavy loan computation to async Celery workers backed by Redis; eliminated N+1 queries throughout using select_related and prefetch_related with full transactional integrity on EMI and amortization storage

•Finverse Financial Management Backend

FastAPI, SQLAlchemy, PostgreSQL, Pydantic, Pytest, AWS EC2

- Designed and built 17+ REST API endpoints with 3-role RBAC (admin, analyst, viewer) enforced at the dependency layer; developed dynamic filtering, pagination, CSV bulk import and export, and analytics views over a PostgreSQL schema
- Wrote a Pytest suite covering access control logic and endpoint behaviour including edge cases; deployed to AWS EC2 with a dual interface serving both browser dashboard and REST API from a single auth backend

•Crypto Trading Simulator

FastAPI, WebSockets, Redis, PostgreSQL, Docker, GitHub Actions, AWS EC2

- Engineered a real-time algorithmic trading backend load-tested to 90+ concurrent WebSocket connections; designed a FIFO portfolio engine supporting hundreds of simulated trades per session with accurate real-time P&L tracking
- Reduced API latency by 40–60% under high-frequency reads using Redis caching; containerized with Docker and deployed via automated GitHub Actions CI/CD pipeline to AWS EC2 behind Nginx

•Event-Driven Notification System

FastAPI, RabbitMQ, Celery, PostgreSQL, SendGrid, OAuth2

- Designed event-driven architecture using RabbitMQ to decouple email delivery from the main request cycle; implemented manual acknowledgments and dead-letter queues for zero message loss on failures
- Built a full audit log of every dispatched notification in PostgreSQL with transactional integrity; integrated Google OAuth2 and SendGrid with delivery status tracking

TECHNICAL SKILLS

Languages: Python, SQL, Bash

Frameworks: Django, Django REST Framework, FastAPI, Flask

Databases and Caching: PostgreSQL, Redis, MongoDB, MySQL, SQLite

Cloud and DevOps: AWS (EC2, S3, IAM), Docker, Nginx, GitHub Actions, CI/CD, Linux

Backend Engineering: REST APIs, WebSockets, Celery, RabbitMQ, Async Processing, OOP, RBAC

Tools: Git, Postman, pytest, SQLAlchemy, Django ORM, Pydantic

ACHIEVEMENTS

- Crypto.com Recognition:** Direct outreach from a VIP and Partnerships Manager at Crypto.com Exchange citing the project
- AWS Educate:** Completed 10+ certifications covering cloud infrastructure, compute, databases, storage, networking, and security
- LeetCode:** Solved 180+ DSA problems covering arrays, recursion, trees, graphs, and dynamic programming
